Model: AL6000

ASD

Advanced Safety Devices

Thanks to the field replaceable pre-calibrated sensor module, you will never have to send in your breathalyzer for calibration.

The AlcoMate Prestige breathalyzer comes with an innovative and patent pending technology that allows users to re-calibrate their breathalyzer without the need for shipping their device to ASD for calibration as often as every 6 months to a year. Prestige users themselves can now swap the sensor module with a factory pre-calibrated module and save not only on cost but also more importantly they eliminate the risk of being without their breathalyzer while it is out for calibration.

The sensor swapping is an ideal solution for all users, especially for clinical users, field officers, or for devices on board a vessel in the open sea. Now vessel operators and clinics can have their breathalyzer always ready and always accurate for immediate alcohol testing.

Why do pre-calibrated sensors make the AL6000 better than the competition?

The pre calibrated, field replaceable sensor has eliminated delays and complications of recalibration by allowing users to simply "snap out" an old sensor and "snap in" a new one. Restoring a reliable and accurate testing unit takes only a matter of seconds.
